

DOCTORAL DISSERTATION

- Topic of dissertation: Current situation and intervention solutions to reduce some common skin diseases among Tay ethnic agricultural workers in Thai Nguyen.
- Specialization: Public health
- Code: 9.72.07.01
- Doctoral candidate: Nong Phuc Thang
- Scientific advisors:
 1. Ass. PhD. Nguyen Quy Thai.
 2. Pro. Do Van Ham.
- Name of academic institute: Thai Nguyen University of Medicine and Pharmacy, Thai Nguyen University.

Summary of new finding of the dissertation:

1. Describe the current status of some skin diseases in Tay ethnic agricultural workers in some communes of Thai Nguyen province in 2017 - 2018.
2. Identify some factors related to skin diseases in agricultural workers of the Tay ethnic group in Thai Nguyen
3. Proposing some feasible and applicable intervention solutions to contribute to reducing skin diseases among Tay ethnic workers in Phu Luong district, Thai Nguyen province, which are accepted by the community and have the potential to be replicated.

APPLICATIONS, POSSIBILITIES OF PRACTICAL APPLICATIONS OR UNEXPECTED ISSUES THAT NEED FURTHER RESEARCH:

1. The research method is widely applicable, reliable and has the potential to be applied to common diseases in workers.
2. The model of effective intervention solutions to reduce the risk of disease and prevent skin diseases is accepted by the community and has the potential to be replicated.
3. The open issue that needs further research is the risk factors for the health of agricultural workers of ethnic minorities in mountainous areas as well as methods to reduce other common diseases.
